Attorney's Docket No.: 07844-506001 / P469

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

**Listing of Claims:**

1. (Previously Presented) A computer program product for performing computer graphics operations on an image represented by digital data, the product tangibly embodied in a computer-readable medium or propagated signal, the product comprising instructions operable to cause a programmable processor to:

receive a representation of a digital image, the image comprising drawing objects organized in a hierarchical relationship;

receive a user input defining an envelope having an outline, the envelope containing a first original drawing object in the image, the envelope being a manipulable graphic object defining a coordinate remapping, the coordinate remapping being applied to generate a resulting drawing object for any original drawing object contained in the envelope, the first original and its resulting drawing object each being a vector object;

wherein the envelope has an interior control point, the interior control point being an anchor point interior to the envelope outline and not being a lattice point, the product further comprising instructions to:

receive a user input manipulating the interior control point and, in response, redefine the coordinate remapping.

2-3. (Cancelled)

4. (Original) A computer program product for performing computer graphics operations on an image represented by digital data, the product tangibly embodied in a computer-readable medium or propagated signal, the product comprising instructions operable to cause a programmable processor to:

Attorney's Docket No.: 07844-506001 / P469

receive a representation of a digital image, the image comprising drawing objects organized in a hierarchical relationship;

receive a user input defining an envelope having an outline, the envelope containing a first original drawing object in the image, the envelope being a manipulable graphic object defining a coordinate remapping, the coordinate remapping being applied to generate a resulting drawing object for any original drawing object contained in the envelope, the first original and its resulting drawing object each being a vector object;

receive from a user a precision input signifying how closely an object contained in the envelope will follow the envelope when the corresponding resulting object is generated and, in response, introduce additional control points to the original contained object if necessary to achieve the precision before applying the coordinate remapping.

5. (Previously Presented) A computer program product for performing computer graphics operations on an image represented by digital data, the product tangibly embodied in a computer-readable medium or propagated signal, the product comprising instructions operable to cause a programmable processor to:

receive a representation of a digital image, the image comprising drawing objects organized in a hierarchical relationship;

receive a user input defining an envelope having an outline, the envelope containing a first original drawing object in the image, the envelope being a manipulable graphic object defining a coordinate remapping, the coordinate remapping being applied to generate a resulting drawing object for any original drawing object contained in the envelope, the first original and its resulting drawing object each being a vector object; and

determine whether an original curve of the first original drawing object at an original anchor point in the envelope has C1 continuity at the original anchor point and, if it does not, move the anchor point solely according to the coordinate remapping, and if it does, move the anchor point to preserve the C1 continuity in a resulting curve in the resulting drawing object at a resulting anchor point corresponding to the original anchor point.

Applicant : Michael Perani and Yong Joo Kil  
Serial No. : 09/898,676  
Filed : July 3, 2001  
Page : 4 of 8

Attorney's Docket No.: 07844-506001 / P469

6. (Previously Presented) The product of claim 5, further comprising instructions to:  
determine whether the C1 continuity is also C2 continuity at the original anchor point  
and, if it is not, move the anchor point solely according to the coordinate remapping, and if it is,  
move the anchor point to preserve the C2 continuity in the resulting curve at the resulting anchor  
point.

7. (Original) The product of claim 5 or 6, wherein:  
the original anchor point is between two tangent handles; and  
the continuity is preserved by first storing a continuity state of the original anchor point  
and the relative position of the original anchor point between the two tangent handles, then  
remapping the tangent handles in accordance with the envelope, and then relocating the anchor  
point between the remapped tangent handles in accordance with the stored relative position.

8. (Original) The product of claim 1 or 5, further comprising instructions to:  
receive from a user a precision input signifying how closely an object contained in the  
envelope will follow the envelope when the corresponding resulting object is generated and, in  
response, introduce additional control points to the original contained object if necessary to  
achieve the precision before applying the coordinate remapping.

9. (Original) The product of claim 1 or 4, further comprising instructions to:  
determine whether an original curve of the first original drawing object at an original  
anchor point in the envelope has C1 continuity at the original anchor point and, if it does,  
preserve the C1 continuity in a resulting curve in the resulting drawing object at a resulting  
anchor point corresponding to the original anchor point.

10. (Original) The product of claim 1, 4 or 5, wherein the image comprises drawing  
objects organized in a hierarchical relationship defined by an object list, the product further  
comprising instructions to:

cause a group to be created in the object list;  
cause the group to be populated with all original objects contained in the envelope;

Attorney's Docket No.: 07844-506001 / P469

cause the group to be populated with all result objects generated in accordance with the coordinate remapping; and

cause the group to be rendered to display the result objects and not display the original objects in the envelope.

11. (Original) The product of claim 10, further comprising instructions to:  
cause the group to be populated with a destination envelope.

12. (Original) The product of claim 10, further comprising instructions to:  
cause the group to be populated with a source envelope.

13. (Cancelled)

14. (Previously Presented) The product of claim 1, 4, or 5, further comprising  
instructions to:

receive an input requesting one or more single additional control points localized to  
portions of the envelope be introduced into the envelope, wherein the additional control point is  
not a lattice point.

15-16. (Cancelled)

17. (Previously Presented) The product of claim 1 or 5, further comprising instructions  
to:

provide variable precision of distortion by introducing additional control points on one or  
more original curves of one or more contained objects before coordinate remapping, with a  
variable frequency of insertion that can be determined in response to user input.

18. (Previously Presented) The product of claim 1, 4, or 5, further comprising  
instructions to:

provide for selection in a user interface an option to select one of multiple pre-made  
envelope meshes having interior control points, each rendered as an envelope group into a

swatch with interior detail.

19. (Previously Presented) The product of claim 18, wherein the swatch has a checkerboard pattern of two or more colors.

20. (Original) The product of claim 1, 4, or 5, further comprising instructions to: display for a user an option to select explicitly a focus for editing operations performed by the user, the focus being selected from a set including at least the envelope and a source shape in the envelope.

21. (Previously Presented) The product of claim 20, further comprising instructions to: display for the user an option to hide or lock the envelope or the source shape, wherein an element that is hidden or locked cannot respond when a user clicks at a control point of the element.

22. (Original) The product of claim 1, 4, or 5 wherein the envelope is a mesh.
